Key

cascade update
(app tenancy of referenced is updated also)

constrained update
(app tenancy of referenced must be compatible, ie at a parent level)

derived reference

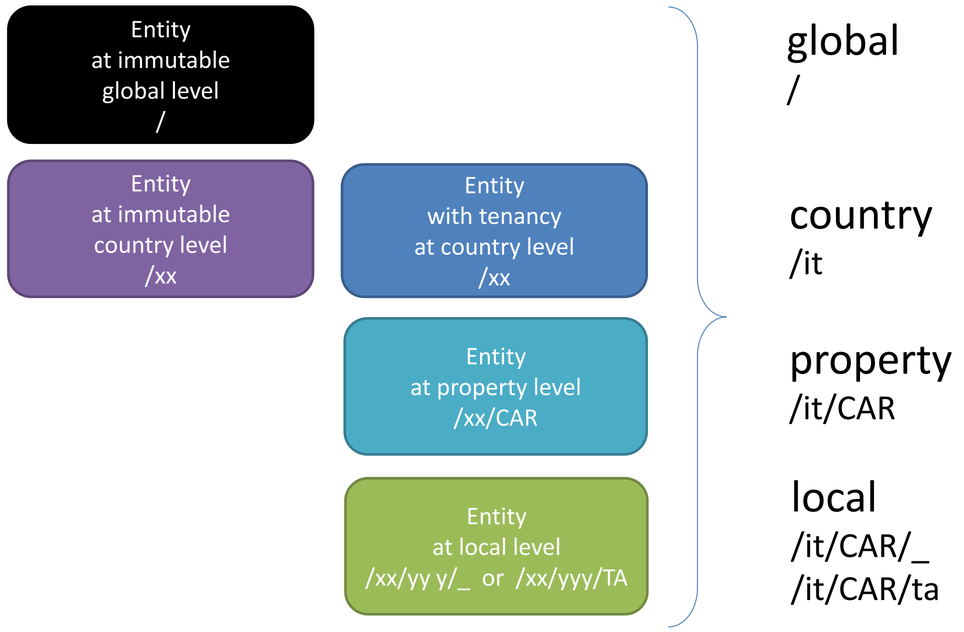
derived but also persisted reference

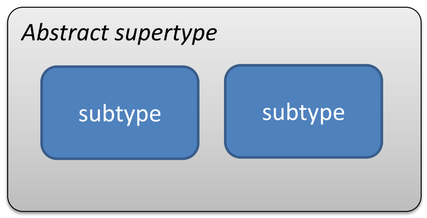
arrow = persisted, navigable

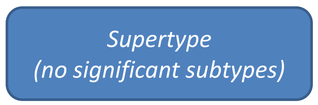
* = many

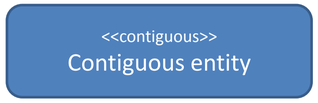
*

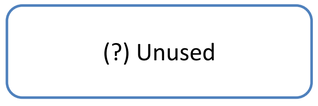
Enums are not included.











either country or property level, dependent on owner

Entity with persisted app tenancy (somewhat akin to “aggregate root”)

Entity with derived app tenancy (specifies the entity that tenancy is derived from)
